

SUPERVISION PROCEDURE

Application of Waterproofing for Exposed Terracotta Brick Roof using **Neoproof® PU W**

A. PREPARATION WORK

Step 1: Check the surface

- The Terracotta Brick Roof needs to be ground and scratched and cleaned, without convexity.
- Fill cracks (if any) with **Neotex® PU Joint** and **Neorep Rapid** repair mortar.

Unsatisfactory surface

Clean brick surface

Neotex® PU Joint Sealant

Satisfactory surface

Surface has not been scratched

Surface has been scratched

Step 3: Apply the first coat with a sprayer or a Roller and wait for dry (can reinforce the base of the wall or the entire floor with a **Neotex Tile** mesh after applying the first layer of waterproofing).

Step 4: Apply the 2nd coat after 24 hours with a paint sprayer or roller perpendicular to layer 1.

Step 5: Can repeat with next layers. (Refer to the attached technical documentation)

NOTES:

- The product will dry after 7 days (Do not do water test while the product is not completely dry)
- To increase the life of the Neoproof PU W construction, it can be applied in many layers depending on consumption from 1.2 kg - 2.5 kg/m² and can reinforce entire floor with mesh. (According to the product longevity sheet)
